Complications Dashboard – Explanation

Purpose

The Complications page provides a focused view of hospital performance related to patient complications. It helps stakeholders quickly identify how facilities are performing compared to national benchmarks and where improvement is needed.

Key Elements

- **KPI Cards**: Show the overall average complication score, the best-performing facility, and the worst-performing facility.
- **Bar Chart**: Ranks facilities by their average complication scores, highlighting leaders and laggards.
- **Pie Chart**: Displays the distribution of facilities compared to national benchmarks (Better, Same, Worse).
- **Trend Line**: Tracks complication scores over time, showing whether performance is improving or declining.

Insights

- The average complication score provides a national baseline for comparison.
- The benchmark distribution reveals whether most facilities are performing above or below national standards.
- Facility rankings highlight where targeted interventions may be needed.
- Trends over time show whether improvement strategies are working.

Takeaway This page equips stakeholders with a clear snapshot of complication performance, enabling data-driven decisions to improve patient outcomes and hospital quality.
